

## Useful Information and Links

- Background Information – online sexual abuse is any type of sexual abuse that happens on the web, whether through social networks, online gaming or using mobile phones. In some cases this involves children being groomed or exploited by an adult. Any child or young person that uses the internet or has a smartphone could be a victim of online abuse regardless of their age, gender or background.
- Reports of online child sexual abuse in the Thames Valley area were 146% higher in March 2020 in comparison with March 2019. We want to warn young people that those they are speaking to may not be who they say they are and to help parents and carers take action in protecting their children from falling victim to online sexual abuse.
